

**NATIONAL COMMISSION FOR SCIENCE  
AND TECHNOLOGY**

**DIRECTORY OF SCIENCE  
AND TECHNOLOGY  
INSTITUTIONS  
IN MALAWI**

## **PREFACE**

The National Commission for Science and Technology (NCST) was established by the Science and Technology Act Number 16 of 2003 with the mandate to advise the Government and other stakeholders on all science and technology matters in order to achieve a science and technology led development.

The Act stipulates in Section 18 (2i) that the Commission “shall encourage the establishment and promote the coordination of research institutions that undertake research and development activities which promote national socio-economic development and other specialized research and development activities in a manner that enhances corporation and collaboration among national and international science and technology personnel and institutions;”

NCST therefore, periodically produces Directories to update the scientific and technological community on recent developments in research, science and technology in Malawi.

The Directory of Science and Technology institutions in Malawi therefore aims at:

- Itemizing and detailing out scientific and technological institutions in Malawi and to promote collaboration among those that have similar inclinations to avoid duplication of research efforts
- Enabling scientists and technologists in the various institutions, the general public and policy makers identify complementary and support services offered for maximum use
- Identifying gaps in staffing so that any expansion of programmes should take that into consideration.

The Directory profiles research, training and service institutions in Malawi and these have been listed in alphabetical order. Institutional data captured comprise: name of institution and mandate, address, telephone, fax, e-mail, title of head of institution, number of senior administrative staff and their qualifications, number of scientists and their qualifications and publications produced by the institution. In academic and training institutions, information has been disaggregated according to faculties and departments.

Questionnaires, institutions' reports and interviews were used to collect information for the compilation of this Directory. Detailed information on specific areas can be obtained from the institutions themselves.

Let me therefore take this opportunity to thank all the institutions that responded to our questionnaires. I hope the Directory will be useful to those who need this information.

Dr Henderson Chimoyo
